

remot@e-sol

A new service concept

Remote-sol is a solution that allows you to take complete control of all your Canon devices, simultaneously reducing administration burdens, increasing up-time for your printers/copiers, and optimising the productivity of your equipment.

- Remote-sol alerts e-solutions with intelligent information when an error occurs, allowing our field technicians to quickly respond to the call.
- Remote-sol also takes the burden out of toner management from the customer, by keeping e-solutions informed of stock levels, usage and even meter readings.
- The communication from your Canon device is outbound only and the data is transmitted across a 128 bit encrypted e-mail.
